Migration Services

Mafi Mushkila can manage IT migrations from end to end, regardless of the size or complexity of the equipment to be relocated. Depending on the customer's requirements this can range from being a pure project or programme management role, to a fully managed service that includes some or all of the following services:

- inventory of equipment
- audit of services, identifying owners and creating passports
- preparation of method statements
- risk and issue management
- migration scheduling / planning
- change control management
- outage negotiation
- scheduling and co-ordinating User Business testing
- negotiating 3rd party software licensing issues
- IP network provisioning
- Storage Area Network (SAN) provisioning
- circuit (ISDN etc.) provisioning
- cable patching schedule preparation
- power distribution planning and management; including phase balancing
- Logistics; provision of transportation for customer installable equipments
- procurement of specialist movers
- managing of third parties to facilitate migration of large floor standing equipment or equipment that must be migrated by a service provider to maintain service or warrantee

Mafi Mushkila Ltd
www.mafi-mushkila.co.uk

Mafi Mushkila operates a fleet of vehicles that have been specifically customised for the transportation of IT equipment. Our vehicle's are deliberately not sign written to preserve anonymity and so not to identify them as carrying valuable IT equipment or media.

IT equipment is protected using a combination of anti-static bubble-wrap and/or foam, before being secured into custom made, security sealed flight cases. Blades cards are individually labelled and packed in specially manufactured anti-static, bubble wrap / foil bags.

To protect the servers from being dropped, they are always handled by two experienced technicians. Servers are kept flat at all times.

Oversized or heavy equipment (up to a maximum of 180kg) that does not have casters is manoeuvred using Gene lifts and can either be packed in flight cases or wrapped in anti-static bubble wrap ready for shipping.

Magnetic (tape) and optical media is packed and shipped in IP67, ATA and MIL C-4150J certified (Pele) cases; which are secured with anti-tamper security tags. Tags are checked and signed for by the customer prior to shipping and on arrival at the destination (to ensure cases have not been opened in transit). Each case is inventoried prior to shipping and again on arrival to ensure no media has gone missing in transit.

No fibrous materials are brought into the datacentre. All flight cases, trolleys, pallet trucks and vans are regularly cleaned to reduce the potential for contamination. Technicians receive regular training, complete lessons learnt and audits of their work to ensure processes and procedures are followed correctly.
